1 Purpose of this document

This document provides the necessary information to access test Amadeus Web Services.

2 Basic application information

Below is basic information that describes application which this document is related to:

- Application user : GR TOURISME
- Application name : Profils
- GOT order : 214148

3 Connection parameters

The following parameters are mandatory for establishing the Web Services connection:

- WSAP : 1ASIWPROG8T
- WBS User ID : WSG8TPRO
- Clear Password : *****
- List of offices : PARFT2796
- Duty code : SU

4 Services

List of services added to the application in test.

Service name	Version
Profile_ReadProfile	12.2
Profile_DeleteProfile	12.2
Profile_UpdateProfile	12.2
Profile_CreateProfile	12.2
Profile_ListDeactivatedProfiles	1.1
Security_SignOut	4.1

5 Amadeus for Developers Portal

<https://developers.amadeus.com/>

The account manager will provide you the access to Amadeus for Developers. This portal is where you can find all relevant information and tools: product news, functional doc, technical doc, test zone, etc.

The connect endpoint (target URL) is defined in the service element of the **WSDL file**, which can be downloaded from "My Enterprise Workspace" area. WSDL files are separated per environment.

The screenshot shows the Amadeus for Developers portal. At the top, there's a navigation bar with links for 'Self-Service APIs', 'Enterprise APIs' (which is highlighted with a red box), 'Blog', and 'Support'. On the right, there's an 'Administration' section showing a user profile for 'WILAILAK CHITSO...' and 'Advantage Travel'. Below the navigation, there's a large banner with the text 'Build Amadeus Travel Now you can' and a 'Get started' button. To the right of the banner, there are several categories: 'Air', 'Booking Management', 'Car & Transfers', 'Cruise', 'Customer Profile', 'Hotel', 'Insurance', and 'See all categories'. A 'Go to APIs Library' button is also present. At the bottom of the main content area, there's a list of links: 'Get Started', 'Technical documentation' (highlighted with a red box), 'Testzone (SOAP)' (highlighted with a red box), 'Implementation guides', 'My Enterprise Workspace' (highlighted with a red box), and 'Release plan'. Below this, there's a section titled 'DISCOVER OUR APIs' with the text: 'Whether you are a developer, a startup or a leading travel brand, Amadeus APIs allow you to build up high-quality apps.' To the right of this text is a decorative graphic featuring a laptop, an airplane, and various travel-related icons like cubes and clouds.

6 Web Services Password

Amadeus is responsible for your initial password set up.

- Our default email has been updated to include your WBS USER.
- For password change, please contact your Account Manager to raise a request via Work Order to DTAGSAS
- You have 2 passwords, one for Test and one for Production. All Test environments (PDT/UAT/SKL) share the same password and the password for test environments will be replicated to other test environments, if available, within 10 minutes.

IMPORTANT: There is no password synchronization process between test and production environment
